Setting the Upper Bound of Growth in Trend Extrapolations

User Experience in Complex Systems: Crafting a Conceptual Framework

Yliopistojen rooli ja valmiudet palveluinnovaatiotoiminnassa

Building theory for creation of systemic value for customer: Case integrated ICT offering

Challenging current model in exploiting university-based inventions

Detecting not-so-technological development: examination of information sources from the managerial perspective with Google chrome case

Evaluating non-core technologies: Contrasting external and internal views on corporate research results

Incentives in transition to a self-managing maintenance organization

Managing non-core technologies with the Research Surplus Portfolio

Order of appearance of technology lifecycle indicators for three case technologies
Perceived knowledge in adoption of a renewable residential heating system

Resources in academic discourse: An empirical investigation of management journals

University's changing role in exploiting innovations based on the research results

Assessing the development phase of emerging technology: The wood pellets case

Brand name strategies of high-technology products

Building theory for systemic customer value: Case Apple

Characteristics of innovation: a customer-centric view of barriers to the adoption of a renewable energy system

Characteristics of innovation in adopting a renewable residential energy system

Characteristics of value in green technology investments

Competition among computer game genres: An empirical study of graphics performance

Customer value-driven process for development of integrated offerings

Empirical classification of resources in a business model concept

Investigation of sources in the information flow: Case Google Chrome

Investing in open source software companies: Deal making from a venture capitalist's perspective
Market reception in establishing a new web application engine category: Case Google Chrome

Open source software use in Finnish software firms

Policy recommendations - Lessons learnt from NICE

The future of innovation is for your eyes only

The prominence of relative advantage in green investments: An examination of Rogers' innovation characteristics

User perceived importance and usage of features in music players: Case iPod

Business model concept: building on resource components

A cluster creating value: an analysis of cluster management's activities from the members' perspective

Antecedents and key success factors in adoption of consumer electronics industry innovations

Characteristics of innovation: perceived factors in adopting pellet heating technology

Classic books - widely cited, rarely used. Case Rogers' characteristics of Innovation

Customers' knowledge and personal attributes in promoting demand for wood pellet heating technologies

Customers' knowledge in promoting demand for bioenergy technologies

Empirical study on resources' contribution to a firms' competitiveness
Examining innovativeness of open source software companies

Market reception in launching a new product: Case Google Chrome

Open innovation in practice: Crowdsourcing

Redesigning Rogers’ framework: Ecology, sustainability and renewability characteristics in assessing adoption of innovation

Representations of resource concepts in academic research

Resources in a business model concept: an empirical study

Success factors for technology convergence collaborations

Technology transfer and learning through supply relationship with big science - Case study about a supplier making the best out of it

Towards successful open source project evaluation
Aaltonen, T., Helander, N. & Seppänen, M., 2008

Value network structures and operations in open source context

An empirical study of measures of academic research projects: Is exploitation potential a priority?

A propositional inventory of human resources for the business model concept

Are services really that valuable? Two diverse cases in an intra-company technology transfer setting
Assessing business model concepts with taxonomical research criteria: A preliminary study

A study of the deployment of open source software - Finnish experiences from public and private sector

Bacon and eggs: Type of involvement and its consequences in open source context

Building SaaS business on top of open source - Economic and legal considerations

Business models in open source software value creation

Business models in open source software value creation

Detailed cost modelling: a case study in warehouse logistics

Do students produce similar or differing conceptual structures base on lectures? An empirical study of teaching high-level theoretical constructs and their contradictions to practising level reality

Evaluating non-core technologies: Contrasting external and internal views on corporate research results

Investing in open source software companies: Deal making from a venture capitalist's perspective

Managing non-core technologies: the management of Research Surplus Portfolio

Open source software management framework
Helander, N., Aaltoinen, T., Mikkenen, T., Oksanen, V., Puhakka, M., Seppänen, M., Vaden, T. & Vainio, N., 2007, Tampere University of Technology, University of Tampere. (e-Business Research Center, Research Reports; vol. 38)

Resource categorisation as a part of business model concept: An empirical assessment of appropriateness from business managers' perspective
Towards a classification of resources for the business model concept

Accounting for networks: the consolidated network approach

A propositional inventory of human resources for the business model concept

Blueprint to a billion dollar (open source) software business out of Finland

Conceptual schema of resources for business models

Ohjelta opinnäytetyön kirjoittajalle

Open source - business as usual?
Puhakka, M. & Seppänen, M., 2006, (e-Business Research Center, Research reports; vol. 33)

Strategic management of exploiting technological opportunities: integrating strategy to operations with business model concept

Thoughts on competitive strategy and OS
Seppänen, M., 2006

Accounting for networks - the consolidated network approach

Business model concepts: a review with case illustration

Early phases of product development process and current business model concepts: A review of the current state-of-the-art and implications for practice and academia

Early stages of triadic collaboration: Challenges in networked B2B service offering development
Effects of automation on cost accounting: A case study in warehouse logistics

Gaps in definitions of a business model concept in practice and theory: An empirical study

Managing a transition to mass customization

Managing the profitability of a network: The idea of a consolidated view on business

Automatic data collection in logistics costing: Analysing the causes and effects of variation

Concepts of business model: a review and consequences to R&D/technology management

Towards consolidated financial statement: Observations from two networks

Towards consolidated financial statement: Observations from two networks
